Experience

lion.app - Software Developer Apprentice
Mar 2023 – Present

- Implemented responsive styling to lion.app's toggle buttons for recurring tasks and completed tasks and added icons elements and .svg files, resulting in better UI design for apprentice users.
- Collaborated with another apprentice to replace inline styling with custom CSS to create styling that more accurately matched the Figma design.
- Improved navbar by adding styling to prevent background elements from being visible behind navbar items for better design and refactoring navbar items to toggle between active and inactive without delay for smoother navigation.
- Updated forms to include time zone and availability input dropdowns for more thorough onboarding process

Projects

Nonprofit Website - React, HTML, CSS
Responsive website where user can view an image carousel, search for events, and more.

Small Business Website - React, HTML, CSS
Multipage website that uses routing, hooks, and localStorage. View products, add them to the cart, and fill out a purchase form.

Memory Game - React, HTML, CSS
Minigame in which player must match circles of the same colors.

Random Joke Generator - React, HTML, CSS
Displays random jokes using fetch API and React hooks.

Color Wheel - JavaScript, HTML, CSS
Tool for users to see different color schemes based on a selected color and scheme type.
